Solvency of State Unemployment Insurance (UI) Trust Funds

Introduction

The publication of the yearly Solvency Report provides an opportunity for interested users to evaluate and compare the solvency level of each state's UI trust fund.

UI taxes paid primarily by employers on the wages paid to employees flow into state UI accounts maintained at the U.S. Treasury. These same accounts are the source of benefit payments to eligible claimants in the regular UI program.

In the 2007–09 recession and its aftermath, 36 states depleted their UI funds and were forced to take advances from the Federal government to continue paying benefits. Much of the borrowing was due to many states having inadequate UI trust funds going into the recession. Now, states must find ways to repay Federal loans as well as build up their trust funds before the next recession. At the beginning of this year, state UI programs have approximately \$13 billion in outstanding Federal loans (and almost an additional \$9 billion in outstanding private borrowing) from 18 states, while only seventeen states have reached what is considered the minimal level of adequate solvency.

This report is constructed to provide the information needed for analyzing trust fund solvency. The seventeen variables in this report are divided into three sections. The first eleven variables provide the status of the State Trust fund, the next two items cover the state's Solvency Measures, followed by the Calculations of Federal Borrowing Statutes and FUTA Credit Reductions. An explanation and derivation of each item can be found in the report glossary.

2014	8	0	1
Potential 2015 ⁴	9	0	8

1) Average High Cost Multiple (AHCM) value is as of 12/31/2014- using actual trust fund balances and estimated wages for CY2014.

This measure compares the state trust fund level to the average of the three highest years of benefit payments.

2) Non-Title XII Advances includes all private market Revenue Bonds and Loans.

3) States that have met the interest free borrowing conditions of an AHCM of 0.6 in last five years and tax maintenance criteria.

4) Credit reductions apply only to states with outstanding loans as of January 1, 2015, and those not repaying their loan as of November 10, 2015.

* Credit reductions apply only to states with outstanding loans as of January 1, 2015, and not repaid by November 10, 2015.

State Unemployment Insurance Solvency Report

Data Definitions

Following are the definitions used for all of the items reported on the State Unemployment Insurance Solvency Report.

- | | |
|---|---|
| 1) UI Trust Fund Balance: | The balance in the individual state account in the Unemployment Trust Fund as of January 1 of the report year. (Source: U.S. Department of Treasury Bureau of Public Debt). |
| 2) Interest Earned: | The total amount of interest earned by the Unemployment Trust Fund account in the fiscal year preceding the report year. (Source: U.S. Department of Treasury Bureau of Public Debt) |
| 3) Outstanding Title XII Advance: | Balance of outstanding advances, as of January 1 of the report year, acquired by the state under Title XII of the Social Security Act. (Source: U.S. Department of Treasury Bureau of Public Debt) |
| 4) Title XII Interest Owed: | The amount of interest incurred on Title XII advances in the fiscal year preceding the report year. (Source: U.S. Department of Treasury Bureau of Public Debt) |
| 5) Total Title XII Advances: | Total amount of advances from 12/31/2007 (beginning of the last recession) to January 1 of the report year. (Source: Unpublished U.S. Department of Treasury reports) |
| 6) Maximum Amount of Outstanding Advances: | The highest amount of month-ending outstanding Title XII advances reached from 12/31/2007 to the report date. (Source: Unpublished U.S. Department of Treasury reports) |
| 7) Title XII Advances Per Covered Employee: | Outstanding Title XII advances as of January 1 of the report year divided by covered employment for the previous calendar year. |
| 8) Date of Maximum Outstanding Amount: | The date of the maximum outstanding Title XII advances (Item 6) since the beginning of the last recession. |
| 9) Title XII Advances as a Percent of Covered Wages: | Outstanding Title XII advances as of January 1 of the report year, divided by total wages for covered employment in the last calendar year, multiplied by 100. |

10) Amount of Private Borrowing Instrument:	The total value of the private borrowing financial instrument at the time of issue.
11) Private Borrowing Instrument Issued:	The date the last private borrowing financial instrument was issued.
12) Trust Fund Compared to State Benefit Costs:	This chart provides a visual comparison between the state's current reserve level, measured by the Reserve Ratio (the state trust fund as of January 1 as a percentage of total wages in the past calendar year), and the state's historic benefit costs (measured by benefit cost rate). Benefit cost rate of any given year is defined as total benefits paid for the year (the sum of regular UI benefits and the state share of the extended benefits, but excluding reimbursable benefits) as a percent of total wages in taxable employment. Benefit Cost Rate in the previous calendar year uses total benefits for that period. The high 3 year average Benefit cost rate uses the benefits in the three highest years in the last twenty years (or a period including three recessions, if longer). The highest year benefit cost rate uses the highest ratio of benefits paid to wages in the last twenty years (or a period including three recessions, if longer).
13) Solvency Level Using Average High Cost Multiple:	The round marker in this chart represents the Average High Cost Multiple, which is measured as the Reserve Ratio (or Trust Fund as % of Total Wages) at the end of the calendar year immediately preceding the report year, divided by the Average High Cost Rate. Average High Cost Rate is the average of the three highest calendar year benefit cost rates in the last 20 years (or a period including three recessions, if longer).
14) Last Year in which State Achieved a 0.6 Average High Cost Multiple	The interest free loan eligibility criteria requires states achieve a solvency target within the previous 5 years. The solvency target for 2015 is a 0.6 Average High Cost Multiple. This entry provides the last year in which the state achieved this solvency target. If the year is dated more than 5 years ago, the state is not eligible for an interest free loan for this year.
15) Lowest Percentage the Average Tax rate is of the Previous 5 year Benefit Cost Rate (in the last 5 years):	In addition to the solvency criterion, the interest free loan eligibility criteria maintains that for each year between the year in which the solvency target was last met and the year of loan, the state's average tax rate on total wages as percentage of the state's five year benefit-cost rate must be at least 75%. This entry provides the lowest of such percentage (N/A if the solvency target was last met more than 5 years

ago). If this value is N/A or below 75%, the state is not eligible for an interest free loan.

16) Lowest Percentage the Average Tax Rate is of the Previous Average Year's Tax Rate (in the last 5 years):

The interest free loan eligibility criteria also maintains that for each year between the year in which the solvency target was last met and the year of loan, the state's average tax rate on total wages as percentage of the state's previous year's average tax rate must be at least 80%. This entry provides the lowest of such percentage (N/A if the solvency target was last met more than 5 years ago). If this value is N/A or below 80%, the state is not eligible for an interest free loan.

17) FUTA Tax Rate

The Federal Unemployment Tax Act of the Internal Revenue Code stipulates that the full FUTA tax rate is 6.0%, levied on the first \$7000 of an employee's earnings. States in full compliance with federal requirements will receive a credit of 5.4% against the FUTA tax.

17a) FUTA Credit Reduction

When a state has an outstanding loan balance on January 1st for two or more consecutive years, and the full amount of the loan is not repaid by November 10 of the second year, the FUTA credit will be reduced until the loan is repaid. The basic reduction schedule consists of a 0.3% annual increment in credit loss.

17b) 2.7 Add-on Credit Reduction:

If a state has outstanding loan balance on January 1st for three or more consecutive years, and the full amount of the loan is not repaid by November 10 of the tax year, then from the third year on, a 2.7% add-on may apply if the state's average tax rate on total wages is below a threshold defined by $2.7\% \times 7,000 / (\text{U.S. Avg. Annual Wage})$.

17c) Benefit Cost Rate Add-on Credit Reduction:

If a state has an outstanding loan balance on January 1st for five or more consecutive years, and the full amount of the loan is not repaid by November 10 of the tax year, then from the fifth year on, a Benefit Cost Rate (BCR) add-on may apply if the state's average tax rate on taxable wages is lower than its 5 year benefit cost rate (or 2.7%, whichever is higher). The amount of the BCR add-on was derived by taking the average of the previous five years of total benefits paid, ending on the second prior year, divided by the total taxable wages in the previous calendar year. From this number, or 2.7% (whichever is higher), is subtracted the average tax rate on taxable wages (total contributions in the past year divided by total taxable wages as defined above). The difference is the BCR add-on amount for the specified year.

17d) Total Credit Reduction

The sum of the basic credit reduction amount and the add-on credit reduction amount.

17e) Final FUTA Tax Rate

The final FUTA credit a state receives is the full credit amount (5.4%) subtracted by the total credit reduction. The difference between the full FUTA tax rate (currently 6.0%) and the final credit is the actual FUTA tax rate for the state.
